Remote Access

To allow remote access to your BGW320-505 device, enter a password and click on the "Enable Remote Access" button below.

User Name	tech

Password

e.g. mywanpass24#

Port to use   50232

Port Range (5000-65000)

Access Type   ○ Read only access
                   ● Update access

URL   https://162.238.141.197:50232

https://[2001:506:6d95:7a3::1]:50232

Enable Remote Access

Help

This page allows you enable remote access to your BGW320-505 device by another person on the Internet.

NOTE: You should only enable remote access for someone you know and trust such as a knowledgeable friend or family member. AT&T will never ask you to do this.

Choose a password that is at least 8 characters and contains characters from two of these categories: alpha, numeric, and special characters.It must not contain regional characters.

The port to use is randomly generated but you may override it with a number in the range of 5000-65000 or 443. (If you select a new port, wait until after you click on Enable Remote Access to provide the URL to the remote user.)

Select the type of access you would like to grant to the remote user - either read-only or update (write) access.

After you click on Enable Remote Access, provide the password and one of the URLs to the remote user. They will have 45 minutes to access your gateway and the session will time out after 20 minutes of inactivity.

After enabling remote access there will be a button available to disable it if you wish.
